

for wall coverings in bathroom areas

**Classen Holz Kontor GmbH**

*Type of flooring: Ceramin® XXL-Tiles*

## **Manual Cleaning**

To remove sticky dirt and stains use Dr. Schutz PU Cleaner diluted in a ratio of 1:200. Apply this with a soft cloth or sponge (no abrasive cleaning textiles!). Follow up by mopping the areas with a dry cotton cloth.

Stubborn stains and residues of soap and limescale can be removed using an alkali strip-cleaner like Dr. Schutz Clean & Strip. For this purpose the cleaner is diluted in a ratio of 1:5, applied with a soft brush or sponge (no abrasive cleaning textiles!) and afterwards the areas are rinsed with clear, warm water, then mopped with a dry cotton cloth.

To remove limescale residues, Dr. Schutz Inolit Pro Clean L, an acidic sanitary and bath cleaner, can be used as required in conjunction with a soft cloth or sponge, followed by rinsing with clear water and wiping with a dry cotton cloth.

## **Important Notes**

In general, abrasive cleaning textiles and cleaning products (e.g. scouring milk) and products containing chlorine must not be used.

The use of steam cleaning machines is not recommended, as they can lead to irreversible damage to the floor. Please pay attention to the product information sheets of the above-mentioned products.
